

Flexible sigmoidoscopy

Information for patients from the Trust's Endoscopy Units

This information is for patients who are having an examination of the lower part of their bowel known as a flexible sigmoidoscopy. It explains what is involved and any significant risks that there may be.

If you do not attend your appointment without telling the Endoscopy Unit in advance you may be removed from the waiting list.

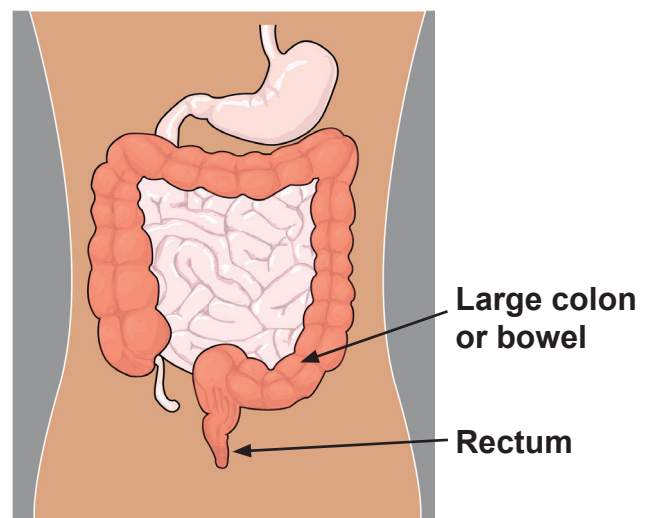

Students and trainees, supervised by qualified staff may be involved in your care. If you do not want a student to be present, please tell the endoscopist or nurse in charge.

The time stated is your booking in time **not** your procedure time, so please tell those coming to hospital with you that this is **not** your procedure time. The test itself takes 10 to 20 minutes, and may take longer if any polyps (projections of tissue rather like warts) are removed. Normally you will be able to go home immediately after your procedure, unless you have a sedative injection in which case you will need to stay in hospital for about 45 to 60 minutes. Occasionally, if there are emergency or very complex cases, the start of your test may be delayed and you may be in hospital for up to four hours.

What is a flexible sigmoidoscopy?

A flexible sigmoidoscopy is an examination, which allows the endoscopist to look directly at the lining of the lower part of your bowel using a sigmoidoscope. This is a flexible tube about the thickness of a woman's index finger.

Sometimes a sample of the lining of the bowel (a biopsy) is taken for laboratory examination. If polyps are found they can be removed during the examination.

How do I prepare for my examination?

- You will be given either an enema just before your procedure or a laxative. This is because the examination will **only be successful if your bowel is empty** so it can be seen clearly.
- If you have been given medicine to drink to clear your bowels, please follow the instructions enclosed. Stop drinking two hours before your procedure.
- If you are having a phosphate enema do not eat for six hours before your procedure. Stop drinking two hours before your procedure.
- If you have **diabetes** or **haemophilia**, please phone the Endoscopy Unit your procedure is booked for specific advice.
- If you are taking **Warfarin, Clopidogrel, Dabigatran, Rivaroxaban, Apixaban, Edoxaban**, or other blood thinning medications, please tell us at least one week before your test.
- If you have a **pacemaker or ICD**, please tell us at least one week before your test.
- You may continue to take other medications as normal, except iron tablets or stool bulking agents (such as Fybogel, Regulan, Proctofibe), which should be stopped one week before your test.
- Please bring a list of any medications you are currently taking. If you have any queries about your medication, please phone the Endoscopy Unit.
- **It is especially important to remember to bring any asthma inhalers or angina sprays with you.**
- **Do not bring any valuables to the unit.** Please note that East Kent Hospitals accepts no responsibility for the loss or damage to personal property, unless the property had been handed in to Trust staff for safe-keeping.
- Please remove your nail polish and all types of false nails before coming to hospital for your procedure.
- Please bring your dressing gown, slippers, and something to read during your stay. Patients feel a spare set of underwear is useful.

What happens when I arrive at the hospital?

- Please report to the reception of the Endoscopy Unit.
- A nurse will check your details, blood pressure, and pulse. If you are allergic to anything (medication, plasters, latex), please tell the nurse.
- You will be asked to remove any jewellery.
- Please tell the nurse if you have a pacemaker, replacement joints, pins, or plates.
- If you have not had a laxative, you will be given an enema to clear your lower bowel.
- **Please do not hesitate to ask any questions you may have.**
- You will have the test you will be having explained to you during your admission. You will then be asked to sign a consent form. Remember you can withdraw your consent for treatment at any time.
- You will need to change into a hospital gown, your dressing gown, and slippers.
- A nurse will stay with you throughout your examination.

What does the examination involve?

- **You will not normally have sedation**, but occasionally it is used.
- If you do have sedation, a small needle will be placed into a vein and a sedative and/or painkiller injected before your examination; this will make you feel relaxed but rarely makes you fall asleep. (This needle will be left lightly strapped to your hand/arm until you are recovered from your procedure).
- For some patients we offer the use of Entonox for this procedure or no medication at all. Entonox is the pain relief gas that women are given while giving birth. It works by taking in a deep breath using a mouth piece.
- A small device for recording your pulse and breathing will be attached to your finger. You will be given oxygen.
- A cuff will be placed on your arm to monitor your blood pressure (please tell the nurse if there is a reason why a certain arm cannot be used).
- A rectal examination will be performed by the endoscopist before your procedure.
- While you are lying comfortably on your left side the endoscopist will gently insert the sigmoidoscope into your back passage (rectum) and pass it around the lower part of your bowel.
- Air will be passed in to your bowel to expand it so the bowel lining can be seen more clearly. This may give you some discomfort, but it will not last long.

- You may be asked to change positions to lie on your back and/or right side (in some cases on your tummy) during the procedure. This is to help the endoscopist navigate the instrument on difficult bends in your colon. You may need to pass wind during your procedure; this is normal and the endoscopist is used to it. **Please do not be embarrassed.**
- A biopsy (a small sample of the lining of your bowel) may be taken during your examination to be sent to the laboratory for more tests. **You cannot feel this.** (A video recording and/or photographs may be taken for your records).
- Any polyps may be removed during the examination, but **you will not feel this either.** Polyps are small growths in the lining of the bowel; they are not cancerous but could turn into a cancer in years to come if not removed. Polyps are removed at sigmoidoscopy by cutting them out. This is done by placing a small loop of wire through which a low current of electricity is passed, causing the stem to be burnt through.
- Afterwards the sigmoidoscope is removed easily.

What happens after my examination?

- You will return to the recovery area to rest.
- If you did not have sedation you can go home as you wish.
- If you had sedation you will need to rest for at least 45 minutes.
- Once recovered you may eat and drink as normal.
- You may still have a little wind; this is natural.
- Before you go home the nurse will tell you the result of the examination and any treatments that may be necessary. Any biopsy result will take longer.
- A letter will be sent to your GP.

Going home

If you have had sedation:

- **You must have a friend or relative with transport to collect you from the Endoscopy Unit and stay with you at home for at least 24 hours until you are fully recovered.**
- **You must not** drive, drink alcohol, operate machinery (including an electric kettle), or sign important documents for 24 hours following the test.
- You may notice that your bowels do not return to normal for a few days following your procedure.
- If you have had Entonox you cannot drive for 30 minutes after the last dose of medication.

If you did not have sedation the above restrictions do not apply to you.

Are there any significant risks?

This test is very safe, but there are some risks linked to this procedure.

- A **reaction** to the sedative. The sedative can affect your breathing making it more slow and shallow.
- When a biopsy is taken or a polyp is removed, rarely there may be a little **bleeding** (the risk is approximately one for every 100 to 200 examinations where a polyp is removed). If this does not stop within 24 hours or is excessive, please contact the Endoscopy Unit or Emergency Department.
- **Perforation**, which is a little tear in the wall of the colon, this is also rare (risk is approximately one for every 1000 examinations). This would need a short stay in hospital and treatment with antibiotics. Very occasionally it may need surgical repair.

Please talk to your endoscopist before your examination if you have any worries about these risks.

Are there alternatives to a flexible sigmoidoscopy?

Yes, there is a CT pneumocolon and a barium enema. They both need the same kind of bowel preparation as a flexible sigmoidoscopy but they do not allow the removal of polyps or the taking of biopsies. This means that you would probably need a flexible sigmoidoscopy anyway.

Any further questions?

Please phone the **Endoscopy Unit**. The units are open Monday to Sunday 8am to 6pm.

- William Harvey Hospital, Ashford Telephone: 01233 61 62 74
- Kent and Canterbury Hospital, Canterbury Telephone: 01227 78 30 58
- Queen Elizabeth the Queen Mother Hospital, Margate Telephone: 01843 23 43 70

If you have any questions between 6pm and 8am Monday to Sunday then contact the **Emergency Department** on:

- William Harvey Hospital, Ashford Telephone: 01233 61 62 07
- Queen Elizabeth the Queen Mother Hospital, Margate Telephone: 01843 23 50 30

A short film outlining what patients can expect when coming to hospital for an endoscopy is available on the East Kent Hospitals web site www.ekhufft.nhs.uk/endoscopy/

Our units are regularly inspected and audited; please ask if you want any information about our performance standards. You can also visit www.patientopinion.co.uk

This leaflet has been produced with and for patients

If you would like this information in **another language, audio, Braille, Easy Read, or large print** please ask a member of staff. You can ask someone to contact us on your behalf.

Any complaints, comments, concerns, or compliments please speak to your doctor or nurse, or contact the Patient Advice and Liaison Service (PALS) on 01227 78 31 45, or email ekh-tr.pals@nhs.net

Patients should not bring in large sums of money or valuables into hospital. Please note that East Kent Hospitals accepts no responsibility for the loss or damage to personal property, unless the property had been handed in to Trust staff for safe-keeping.

Further patient leaflets are available via the East Kent Hospitals web site www.ekhufft.nhs.uk/patientinformation
